

# CANTHO CITY CLIMATE CHANGE and URBAN PLANNING

SECRETARY OF STEERING COMMITTEE FOR 158 DECISION  
Master. KY QUANG VINH

## CANTHO CITY CLIMATE CHANGE and URBAN PLANNING BRIEF INTRODUCTION

### Cantho In 2009

Area:	1400,96 km <sup>2</sup> , 3,5% of M.Delta
Administrative units:	9 Districts, 85wards+communes
Population:	1,189,000 people
Population density:	848 people/km <sup>2</sup> (~double the Mekong Delta average)
Key economic activities:	Rice, aquatic products
Mean altitude:	0,8-1,0 m

**No saline intrusion or deep inundation in the past,**

- On the south side of Hau river, a main stream of Mekong River
- The biggest city and in the center of MD (170km from HCMC)
- The main force for socio-economic development,
- The most important site for air-water-road traffic

## CANTHO CITY CLIMATE CHANGE and URBAN PLANNING CLIMATE CHANGE IMPACTS VULNERABILITIES ASSESSMENT-BY ROCKEFELLER FUND

Inundation effect map on built environment, SLR 50 cm scenario

## CANTHO CITY CLIMATE CHANGE and URBAN PLANNING CLIMATE CHANGE IMPACTS VULNERABILITIES ASSESSMENT-BY START CENTER OF CHULALONGKORN UNIVERSITY

### WATER LEVELS IN MEKONG DELTA WILL RISE TWICE HEIGHT OF SEA LEVEL RISE

Due to 5 Contributing factors:

- » FLOOD FROM UPPER STREAM
- » LOCAL RAINFALL
- » SEA LEVEL RISE
- » NORTHEAST WIND
- » SPIN FROM EQUATOR

## CANTHO CITY CLIMATE CHANGE and URBAN PLANNING CLIMATE CHANGE IMPACTS VULNERABILITIES ASSESSMENT-BY ROCKEFELLER FUND

Estimated inundation (cm) to some construction, scenario SLR 50 cm

## CANTHO CITY CLIMATE CHANGE and URBAN PLANNING CLIMATE CHANGE IMPACTS VULNERABILITIES ASSESSMENT-BY START CENTER OF CHULALONGKORN UNIVERSITY

### Causes of change:

1. Climate change
2. Downstream impacts from development in upper region countries

### Impacts facing Can Tho:

- **Polarised extremes in hydrology regime**
  - deep inundation in rain season
  - extreme drought in dry season
- **Saline intrusion**
  - **Deep inundation** by saline intrusion
  - **Built environment** under threat due to the low elevation of cantho city (0.8-1m above sea level),
  - Threats will also affect **livelihoods**, mobility and ability of city population to earn a living,
  - **food security** of can tho city (and the entire mekong delta) is threatened by the threats of climate change

Can Tho City Climate Change & Resilience Works  
RESILIENCE WORKS

### MACRO LEVEL

- Research to build sea dyke and rivers system dyke,
- Research to build fresh water reservoirs for dry season utilities
- Research to recharge groundwater for supply purpose.

Can Tho City Climate Change & Resilience Works  
NEXT STEP WORKS

### MAIN MEASURES

- Cantho CC works must be in the context of Mekong delta,
- Mobilize and Strengthen local people and staff's capacities on resilience climate change works,
- Call for climate change resilience studies, research and financial support from foreign organizations and institutes.

Can Tho City Climate Change & Resilience Works  
RESILIENCE WORKS

### MICRO LEVEL

- Public climate change awareness and adaptive works,
- Research to build climate change resilience houses,
- Research and build capacity in climate change resilience production systems,

Can Tho City Climate Change & Resilience Works  
NEXT STEP WORKS
